

SECURE INITIALIZATION OF COMMUNICATION WITH A NETWORK
RESOURCE

ABSTRACT OF THE DISCLOSURE

- 5 A method for initialization of secure communication between
a network resource and a client via a network. The method
includes receiving an access at the network resource from a
management application of a client. In response to the access,
configuration parameters are generated for initializing secure
10 communication with the client via the network. Security
configuration information is printed showing the configuration
parameters. The security configuration information is for enabling
manual input of the configuration parameters into the management
application. Secure communication is implemented with the
15 management application in accordance with the configuration
parameters.
